-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

Claims 1-9 are objected to because of the following informalities: In claim 1, line 18, it is not clear in what sense at least one inner plug pin and one inner body pin move together. Appropriate correction is required.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eizen (268) in view of Mendelsohn (249).

As seen in fig. 2, Eizen teaches a lock body 10 and a plug 12, each including telescopic pin assemblies including an outer body pin 44, an inner body pin 42, an outer plug pin 34 and an inner plug pin 32. Mendelsohn teaches that it is well known in the lock anti-picking art to form an annular projection on the pins 21, 22 to be received in an annular recess at 24, 25 in the surface which is adjacent to the pin during a picking attempt. It would have been obvious to one of ordinary skill in the art at the time the invention was made to form an annular recess or multiple annular recesses in the inner surface of an outer body pin or an outer plug pin to receive a projection on an inner body pin or inner plug pin during an attempted picking operation, in view of the teaching of Mendelsohn, the motivation being to prevent unauthorized picking of the lock, to optimize the security of the lock.
